## CHARACTERISTICS

The PNCE are electric cylinders with a precision ball screw drive. The electric cylinder is based on the standard ISO 15552. Its outer design and dimensions are very similar to pneumatic cylinders. High performance features such as, high speeds, good positioning accuracy and high repeatability are ensured through a precision ball screw with reduced backlash (preload on request) of the ball nut and non-rotating piston rod. For a long service life the re-lubrication can be done through a lubrication nipple. The design with its smooth surfaces enables easy cleaning of the cylinder. In combination with a lubricant class H1 it is also suitable for food & beverage applications. It can be additionally equipped with switches and ISO standard accessories.

The excellent sealing of the components in the cylinder ensures an IP65 protection class and protects the interior of the cylinder from dust, water and other contaminants. Version IP65CR also offers a high corrosion resistance in harsh environments.

The aluminium profiles are manufactured according to the medium EN 12020-2 standard

Sensor holder

ISO standard accessories

Motor adapter with coupling (IP65)

Motor side drive (IP65)

## STRUCTURAL DESIGN

### • Standard version (S)\*

- 1 – Front cap
- 2 – Drive cap
- 3 – Smooth cylinder profile
- 4 – Hex nut
- 5 – Piston rod (stainless steel) with an anti-rotation device
- 6 – Piston rod seal
- 7 – Pressure compensation
- 8 – Lubrication nipple

\* IP40 protection class

- 8 – Lubrication nipple
- 9 – Connection for pressure compensation

### • IP65 protection class (IP65)

The appropriate sealing of the external parts ensures the electric cylinder the IP65 protection class. The IP65 protection class of the electric cylinder fulfils the specifications to IEC 60 529. The connection for pressure compensation in the cylinder profile ensures the exchange of air between the interior of the cylinder and the environment. This prevents the occurrence of excess pressure or negative pressure inside the electric cylinder. It also protects the interior of the cylinder from the external media like dust and water.

### • IP65 protection class with high corrosion resistance (IP65CR)

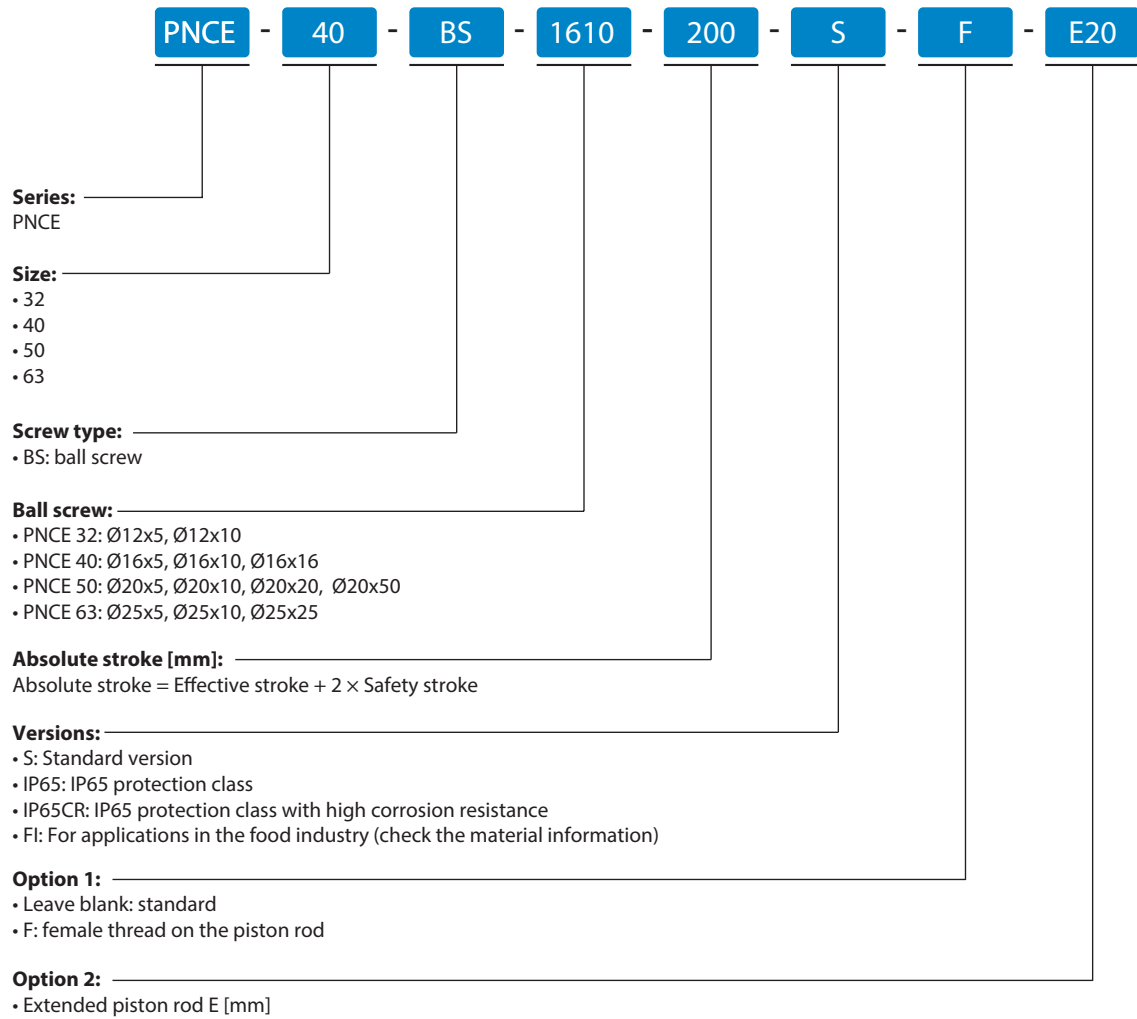

It offers high corrosion resistance in harsh environments. The version IP65CR includes all the features of the electric cylinder version IP65. In addition to ensuring high corrosion resistance all the external parts are corrosion resistant (e.g. the connection for pressure compensation, lubrication nipple, and the connection elements are made of stainless steel). More information about materials is available upon request in the extended material information list.

### • For applications in the food industry (FI)

The version FI includes all the features of the electric cylinder version IP65CR. It is upgraded by materials suitable for some applications in the food industry. The cylinder is greased with a lubricant class NSF H1. The design with the smooth surfaces of the aluminium profile enables its quick and effective cleaning. During the cleaning the sealing air can be applied to the connection for pressure compensation. The use for the food & beverage industry is limited by the materials of the electric cylinder. More information about materials is available upon request in the extended material information list.

## HOW TO ORDER

## TECHNICAL DATA

## General technical data for the PNCE series

PNCE	Ball screw	Dynamic* load capacity	Maximum axial load**	Maximum drive torque	Maximum travel speed***	Max. rotational speed	No load torque	Minimum stroke	Maximum stroke	Axial backlash	Maximum acceleration
	d×l [mm]	C [N]	F <sub>max</sub> [N]	M <sub>p</sub> [Nm]	v <sub>max</sub> [m/s]	n <sub>max</sub> [min <sup>-1</sup> ]	M <sub>0</sub> [Nm]	s <sub>min</sub> [mm]	s <sub>max</sub> [mm]	[mm]	[m/s <sup>2</sup> ]
32	12×5	5000	2540	2,2	0,48	5800	0,10	30	800	< 0,02	20
	12×10	3800	1270		0,97		0,15	30

	16×10	11550	3010		0,70		0,20	35			
	16×16	8170	1880		1,12		0,25	35			
50	20×5	14800	14600	12,9	0,28	3300	0,30	50	1000	< 0,02	20
	20×10	15900	7830	13,9	0,55		0,35	55			
	20×20	16250	3900		1,10	3000	0,40	50			
	20×50	13000	1560		2,5		0,50	30			
63	25×5	16700	16500	14,6	0,23	2700	0,50	40	1200	< 0,02	20
	25×10	15800	15800	28,0	0,45		0,55	40			
	25×25	13400	7940	35,1	1,13		0,65	30			

\* Dynamic load capacity of ball screw drive. This value is the basis for calculating the service life.

\*\* When considering service life, see page 10. This value needs to be considered when using the piston rod or mounting attachments' accessories.

\*\*\* Maximum travel speed depends of the absolute stroke of the PNCE, see diagrams on page 7.

## Operating conditions

Operating temperature	0°C ~ +60°C
Protection class	IP40, IP65
Duty cycle	100 %

**i** Recommended values of loads:

All the data of the dynamic load capacities (ball screw drive) stated in the upper table are theoretical without considering any safety factor. The safety factor depends on the application and its requested safety and service life.

We recommend a minimum safety factor  $f_s = 5,0$ , where  $f_s$  is defined as  $f_s = C / F_m$ .

See page 10 for information on how the applied mean axial load  $F_m$  affects the service life.

## Mass and mass moment of inertia

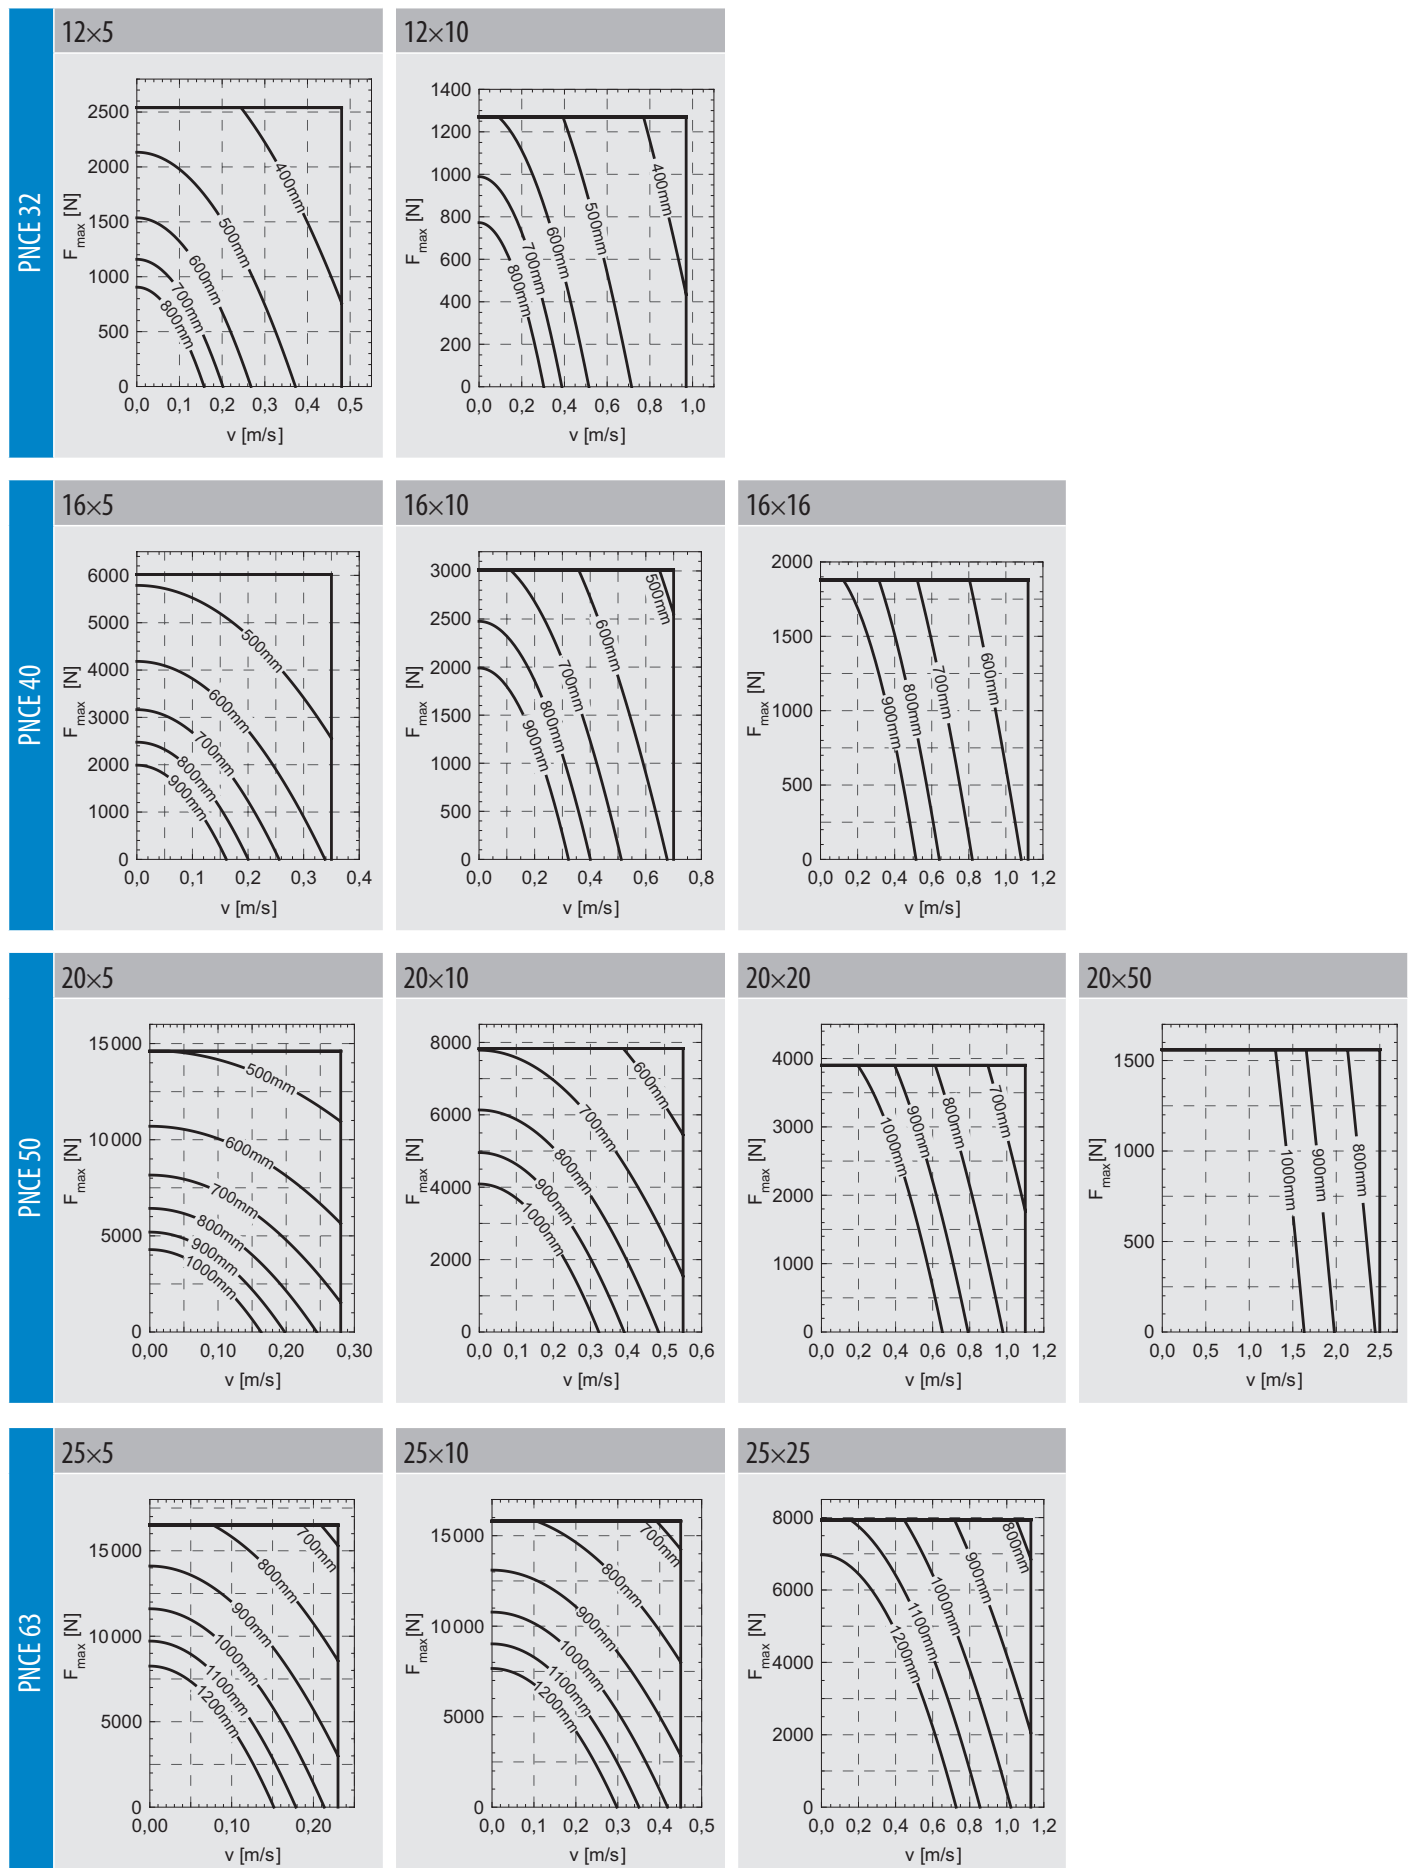

PNCE	Ball screw	Moved mass **	Mass of the electric cylinder	Mass moment of inertia
	d×l [mm]	m <sub>m</sub> [kg]	m <sub>PNCE</sub> [kg]	J <sub>PNCE</sub> [10 <sup>-6</sup> kg m <sup>2</sup> ]
32	12×5	0,32 + 0,0010 × (Absolute stroke + E)	1,10 + 0,0043 × Absolute stroke + 0,0010 × E	2,15 + 0,0128 × Absolute stroke + 0,0006 × E + 0,6333 × m <sub>load</sub>
	12×10			2,75 + 0,0147 × Absolute stroke + 0,0025 × E + 2,5331 × m <sub>load</sub>
40	16×5	0,44 + 0,0007 × (Absolute stroke + E)	1,45 + 0,0051 × Absolute stroke + 0,0007 × E	4,50 + 0,0395 × Absolute stroke + 0,0004 × E + 0,6333 × m <sub>load</sub>
	16×10			5,35 + 0,0408 × Absolute stroke + 0,0018 × E + 2,5331 × m <sub>load</sub>
	16×16			7,10 + 0,0436 × Absolute stroke + 0,0046 × E + 6,4846 × m <sub>load</sub>
50	20×5	0,95 + 0,0012 × (Absolute stroke + E)	2,50 + 0,0073 × Absolute stroke + 0,0012 × E	17,75 + 0,0817 × Absolute stroke + 0,0007 × E + 0,6333 × m <sub>load</sub>
	20×10			19,55 + 0,0839 × Absolute stroke + 0,0030 × E + 2,5331 × m <sub>load</sub>
	20×20	0,88 + 0,0012 × (Absolute stroke + E)	2,43 + 0,0073 × Absolute stroke + 0,0012 × E	26,75 + 0,0928 × Absolute stroke + 0,0118 × E + 10,1322 × m <sub>load</sub>
	20×50			73,80 + 0,1549 × Absolute stroke + 0,0740 × E + 63,3258 × m <sub>load</sub>
63	25×5	1,00 + 0,0011 × (Absolute stroke + E)	3,05 + 0,0097 × Absolute stroke + 0,0011 × E	32,55 + 0,2358 × Absolute stroke + 0,0007 × E + 0,6333 × m <sub>load</sub>
	25×10			34,45 + 0,2378 × Absolute stroke + 0,0028 × E + 2,5331 × m <sub>load</sub>
	25×25	0,98 + 0,0011 × (Absolute stroke + E)	3,03 + 0,0097 × Absolute stroke + 0,0011 × E	47,30 + 0,2523 × Absolute stroke + 0,0172 × E + 15,8315 × m <sub>load</sub>

\*\* The moved mass is already considered in the equation for calculating the mass of the electric cylinder  $m_{PNCE}$  and the mass moment of inertia  $J_{PNCE}$ . The moved mass includes the mass of the piston rod with the internal anti-rotation device and ball nut.

m <sub>load</sub>	Applied mass to be moved	[kg]
E	Extended piston rod	[mm]
Absolute stroke		[mm]

PNCE 32

PNCE 40

PNCE 50

PNCE 63

### Mean axial load $F_m$ calculation

$$F_m = \sqrt[3]{\frac{|F_1|^3 \times s_1 + |F_2|^3 \times s_2 + \dots + |F_n|^3 \times s_n}{s_1 + s_2 + \dots + s_n}}$$

$F_m$	mean axial load
$F_i$	i-th axial load of a given loading regime $F(s)$ , $i \in \{1, 2, \dots, n\}$
$s_i$	i-th travel path of a given loading regime $F(s)$ , $i \in \{1, 2, \dots, n\}$

Diagrams presented above are showing the theoretically determined service life of the ball screw drive when the mean axial load  $F_m$  at room temperature is taken into consideration.

It should be noted that application conditions may have a significant effect on the service life.

### Absolute stroke and length of the PNCE definition

**Absolute stroke = Effective stroke + 2 × Safety stroke**

**L = L1 + Absolute stroke**

**L<sub>t</sub> = L + L2 + E**

**E<sub>max</sub> = 200 mm**

**Female thread:**

**L<sub>t</sub> = L + L4 + E**

**E<sub>max</sub> = 200 mm**

The electric cylinder doesn't include any safety stroke.

**E** Extended piston rod [mm]

63	$5,54 + 0,0047 \times (\text{Abs. stroke} + E)$	$2,90 + 0,0047 \times (\text{Abs. stroke} + E)$

\* The moved mass of GUH is already considered in the equation for calculating the mass of GUH  $m_{GUH}$

### Blanking screws (Material: stainless steel AISI 304)

**i** set contains 4 pcs

Blanking screw		ØM	L1	L2	ØD	ZK
Tip / Type	Code	[mm]				
<b>M6</b>	<b>69156</b>	M6	19,5	5,5	12,8	10
<b>M8</b>	<b>69157</b>	M8	24	8	17	13

### LUBRICATION POSITION

PNCE	Ball screw	Lubrication nipple position	Piston rod position	LP
	d x l [mm]	[mm]	[mm]	[mm]
<b>32</b>	12x5, 12x0	Abs. stroke / 2 + 38,0	Abs. stroke / 2 - 9,0	Abs. stroke / 2 + E - 1,0
<b>40</b>	16x5, 16x10, 16x16	Abs. stroke / 2 + 42,0	Abs. stroke / 2 - 10,5	Abs. stroke / 2 + E - 0,5
<b>50</b>	20x5, 20x10, 20x20	Abs. stroke / 2 + 53,5	Abs. stroke / 2 - 22,0	Abs. stroke / 2 + E - 10,0
	20x50		Abs. stroke / 2 - 5,0	Abs. stroke / 2 + E + 7,0
<b>63</b>	25x5, 25x10	Abs. stroke / 2 + 47,5	Abs. stroke / 2 - 13,5	Abs. stroke / 2 + E - 1,5
	25x25		Abs. stroke / 2 - 4,0	Abs. stroke / 2 + E + 8,0

The lubrication nipple on the aluminum profile of the electric cylinder allows easy re-lubrication of the ball screw.

To achieve the lubricating position the piston rod must be moved from the end position into position (Piston rod position) shown in the table above. The same position is achieved when the distance LP is obtained.

### MOTOR ADAPTER WITH COUPLING

### HOW TO ORDER

		2	8,9	400	0,17	631	3,10	174	140					95	22

\* This is the load which is linearly dependent on the maximum drive torque M<sub>p, MSD</sub> and is generated by the correct pretension of the belt. This load needs to be reduced in accordance with the capabilities of the motor.

\*\* Minimum dimension L1 depends on the size of particular clamping set. Values can be found on the upper table on page 22.

### Dimensions

PNCE	Type	Gear ratio	E	F	G	G2	N ***	K	L	P	ØM2
		i	[mm]								
32	T1	1	65	68	42	36	8	31	135	32,5	M6×8,5

### HOW TO ORDER

COUPLING - EKL10 - A - F8 - F14PFN

Coupling

Coupling type/size:

• 5 • 10 • 20 • 60

Elastomer insert type:

• A

Hole diameter

Option:

• PFN: with keyway

• Leave blank: without keyway

## MAGNETIC FIELD SENSORS

1 - Magnetic field sensor  
2 - Sensor holder

**i** Mounting of the Magnetic field sensor on PNCE requires a HPNCE sensor holder.

PNCE	L1	L2	L3	L4	L5
	[mm]				
32	30	53	6,5	19,5	10
40	30	60	6,5	19,5	10
50	30	71	6,5	22,5	10
63	30	81	6,5	22,5	10

SMU-40TP-K PNP NO / PNP NC	Code	Type	Compatibility	
	68997	HPNCE sensor holder	PNCE 32	
	68998		PNCE 40	
	68999		PNCE 50	
	69000		PNCE 63	
	57815	SMU-40TP-K PNP NC	PNCE series	
	40679	SMU-40TP-K PNP NO	PNCE series	
	8146	Extension cable length 2m - Straight connector		
	8147	Extension cable length 5m - Straight connector		
	9017	Extension cable length 2m - Angled connector		
	9019	Extension cable length 5m - Angled connector		

TECHNICAL DATA	SMU-40TP-K PNP NC	SMU-40TP-K PNP NO
Sensor Type	GMR sensor	GMR sensor
Switching function	NC	NO
Output	PNP	PNP
Operating voltage	10 ~ 30 V DC	10 ~ 30 V DC
Switching Current	200 mA max.	100 mA max.
Power rating	6,0 W max.	6,0 W max.
Voltage Drop	1,5 V / 100mA max.	1,5 V / 100mA max.
Current Consumption	20mA / 24 V max.	20mA / 24 V max.
Switching Frequency	1000 Hz	1000 Hz
Ambient temperature	-10 ~ +70°C	-10 ~ +70°C
Shock/Vibration	50 G / 9 G	50 G / 9 G
Protection class	IP67	IP67
LED indicator	Yellow	Yellow
Electrical connection	M8, 3-pin	M8, 3-pin
Cable material length	PU - 0,3m	PU - 0,3m
Extension cable	Energy chain compliant	Energy chain compliant

### LOAD TORQUE CALCULATION AND DETERMINATION OF MAXIMUM AXIAL LOAD ON THE PNCE CYLINDER

#### Load torque

The load torque is a function of an applied axial load on the PNCE and can be calculated as follows:

$$M_{\text{load}} = \frac{F_{\text{axial}} \times l}{2000 \times \pi \times \eta}$$

When the motor side drive (MSD) is taken into consideration:

$$M_{\text{load}} = \frac{F_{\text{axial}} \times l}{2000 \times \pi \times \eta \times i}$$

$M_{\text{load}}$	Load torque	[Nm]
$F_{\text{axial}}$	Applied axial load on the PNCE	[N]
$l$	Ball screw lead	[mm]
$\eta$	Mechanical efficiency $\approx 0,9$	[-]
$i$	Gear ratio	[-]

It should be noted that the load torque  $M_{\text{load}}$  must never exceed the maximum drive torque  $M_p$ .

#### Maximum axial load on the PNCE

Application conditions example:

- PNCE 40 with ball screw 16x5
- Absolute stroke = 500 mm
- Extended piston rod E = 0 mm
- Travel speed  $v_{\text{max}} = 0,2$  m/s
- Using motor side drive type T1 with a gear ratio  $i = 1,5$
- Mounting: simple – simple mount with SGS and SBG attachment

Using the diagram of the maximum axial loading as a function of the absolute stroke, the maximum axial load depending on the given mounting case can be obtained as  $F_{\text{max}} = 700$  N.

Using the diagram of the maximum axial loading as a function of the travel speed, the maximum axial load depending on the ball screw lead and absolute stroke can be obtained as  $F_{\text{max}} = 4700$  N.

For a selected motor side drive, the maximum drive torque  $M_{p, \text{MSD}} = 2$  Nm can be found (technical data table). Using the equation for the load torque calculation when the motor side drive is taken into consideration, the maximum axial load  $F_{\text{max}} = 3392$  N can be calculated.

For selected mounting attachments, the maximum axial load is limited to the maximum axial load of the PNCE, i.e.  $F_{\text{max}} = 6020$  N.

Finally, for this application example, the maximum axial load on the PNCE can be determined, i.e.  $F_{\text{max}} = 700$  N. This is the smallest value of all the values obtained in the previous steps.

## CALCULATE YOUR OWN PROJECT!

The calculation program "LINEAR UNITS SELECTION" enables the fast and simple selection of a suitable linear axis based on your application data. As a result of the interpretation of this data, the program provides you with diverse information, e.g. driving torque, rotation speed, maximal process speed, durability and other information about a particular product. So contact us!

## WE DISTRIBUTE ALL OVER THE WORLD

We cover all major markets; if you wish to contact us, send us an enquiry and we would be happy to assist you.
